

Report to Council on data (July and August) downloaded from the static SID on Clifford Road

The following diagrams show little change in the speeding profile of vehicles passing the static SID placed on Clifford Road by the school.

The data shows that at least 15% of violations are for speeds in excess of 31mph with a maximum speed recorded of 69mph. The two lower charts show graphically the distribution of the speeding violations.

It should be remembered that the SID picks up vehicles long before the section of road immediately in front of the school and that whilst it does not change every driver's behaviour many vehicles have slowed down by the time they are level with the SID, though arguably not enough and if they adhered to the "20mph zone" there would be no requirement to slow down at all!
